

## ***Geology Exploration - "The present is the key to the past"***

Sailing on the boat and crossing the Tolo channel at the northeastern New Territories, our principal, teacher and S.5 Geography students have started an amazing geological journey to explore the past geological events (416 million years ago) at the Bluff Head, Ap Chau, Kat O, Yan Chau Tong and Lai Chi Wo in July, 2022.

Along the Tolo Channel, our students discovered the oldest rock in Hong Kong formed during the Devonian stage. The major Tolo Channel fault creates several distinctive sedimentary rock features such as the devil's fist, layered rock structures, reddish in color, twisted and tilted in nature. Just like you are tasting a delicious dish of Parma ham and watching the hand of Iron Man.
