Innovation for Smart City Competition 2023

Congratulations to the group of our senior form students: Chan Tsz San, Yu Lap King and Chen Yan Tai who won the 2nd Runner Up in the Innovation for Smart City Competition 2023.

They spent months formulating a deliverable based on the Smart City Blue Print 2.0 of Hong Kong, and built an all-in-one platform called 'Way to Goal' which merges various types of real-time information and the function of social media into existing online maps. The platform allows users to view the upcoming events at different places and plan their trips based on other users' comments. Both commercial sectors and other people can promote their events. The platforms suggest the best events to users based on the users' data analysis. Besides, being an online map, it can also suggest the route to an event based on the current traffic situation.
